Maintenance Planning System in CSNS

Lin Wang

Email: wanglin@ihep.ac.cn

Controls Group, Accelerator System Division, CSNS

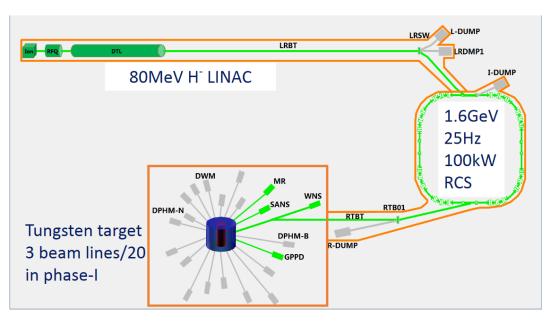

EPICS Collaboration Meeting Spring 2021 6-9 July 2021, hosted by the Canadian Light Source

Scenario

- CSNS passed the national inspection and acceptance on August 2018
 - Shifted from beam commissioning to reliable operation.
- A series of database applications are needed to manage facility information
 - Operation summary system, maintenance planning system, device database, etc.

Maintenance Planning System

Motivation

- Lightweight web application, thus Easy to develop, deploy and upgrade.
- To record and track weekly / summer-shutdown maintenance tasks.

Features

- Maintenance tasks can be created, edited, updated progress, confirmed.
- Facility systems, task requirements and user information are editable for admin users.
- Provides powerful search function.
- Provides permission control.

Why not electronic logbook?

The existing ones do not meet above features.

Development team

- Coding: Lin Wang <u>wanglin@ihep.ac.cn</u>
- Manager: Yuliang Zhang zhangyl@ihep.ac.cn

Workflow

- Step 1: Users fill out a maintenance task ahead of time
 - Part: division, system
 - Description: summary, detail, comment
 - Duration: startAt, endAt
 - Requirement: utility, resource, condition
 - Person: responsiblePerson, participants
- Step 2: Users update the task progress
- Step 3: Users finalize the task
- Step 4: ASD leader confirms the task
 - After that, the task is not editable anymore.

Technical solution

Access control

- Authentication: OAuth2 (IHEP email accounts)
- Session management: JWT token + LocalStorage
- State management: Vuex

Frontend

- BootstrapVue component library
- Vue.js framework

Backend

Node.js + Express.js + Mongoose

Persistence

- Database: MongoDB
- Attachment: File system

Application

web UI

REST API

Apache2

Node.js

Frontend

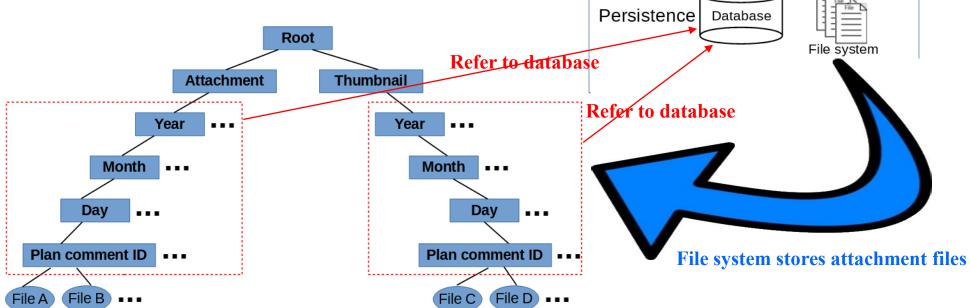

Backend

Technical solution (Continued)

Architecture

- Frontend: SPA (Single Page Application)
- Backend: REST web service
- Persistence: Database + File system
- Attachment files are stored in file system

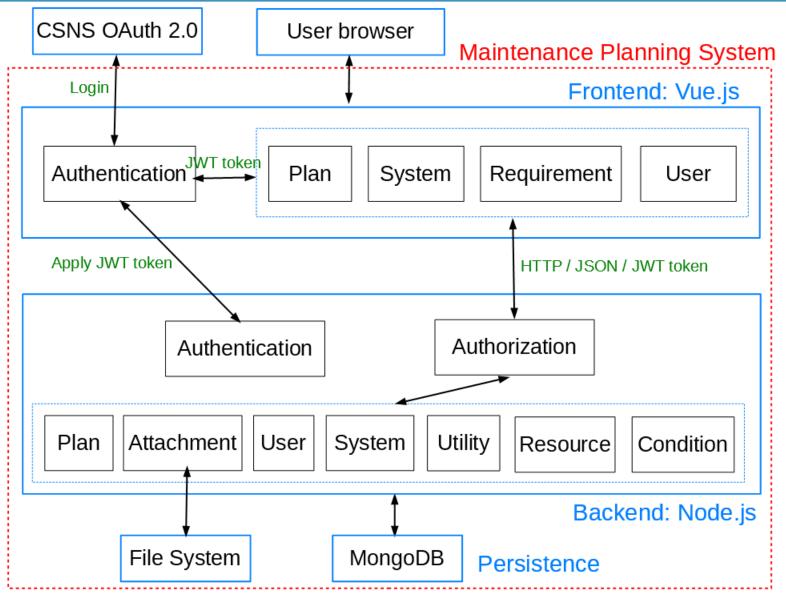

Relation of software modules

- Users login via OAuth2 server
- Frontend requests JWT token from backend
- Frontend modules can access backend services with the JWT token

Copied from network

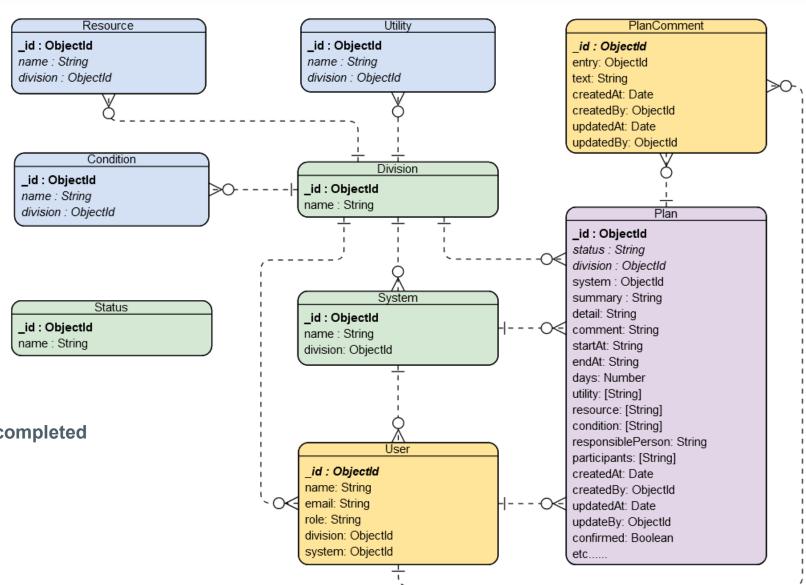

Schema

- 9 collections in MongoDB database
- Plan: maintenance task
- PlanComment: task progress
- User: user info and permission
- Division: accelerator or experiment
- System: vacuum, controls, etc.
- Utility: transport, crane, etc.
- Resource: linac tunnel, ring tunnel, etc.
- Condition: water, electronic, etc.
- Status: NotStarted, InProgress, delayed, completed

Available operations

- Users update task progress
- Users set task status
- ASD leader confirms the task

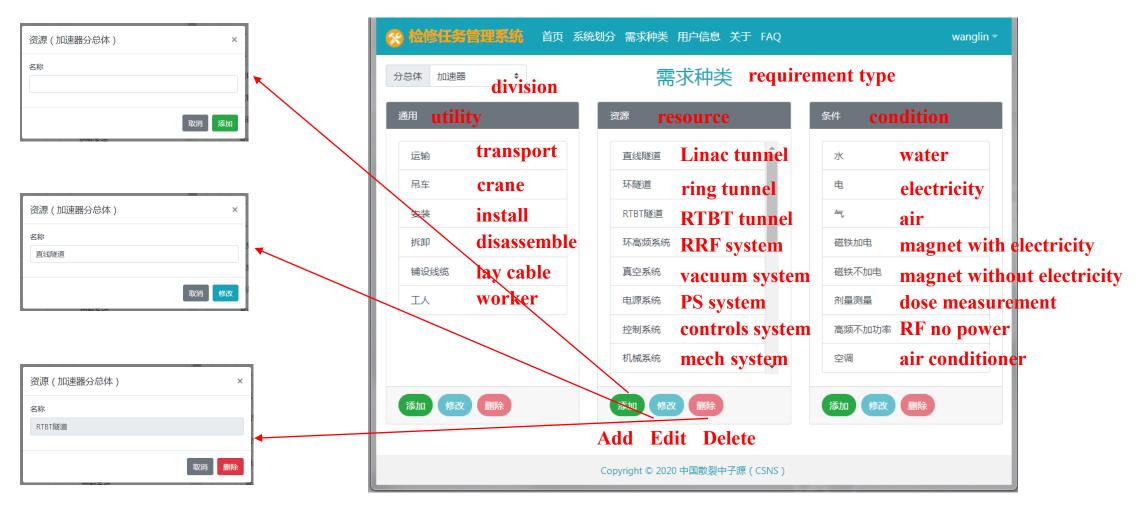

When creating a maintenance task, users need to specify which system the task belongs to. System options are manageable in this page.

When creating a maintenance task, users can specify which requirements the task needs. Requirement options are manageable in this page.

User information is used for permission control, i.e. normal user or admin user. User information are manageable in this page.

Conclusion

- Maintenance Planning System in CSNS
 - Online since January, 2020
 - Recording Weekly maintenance (one day a week)
 - Recording summer-shutdown maintenance (~ two months a year)
- Stored data, as of June 30, 2021
 - Weekly maintenance tasks: 185
 - Summer-shutdown maintenance tasks: 314
